Attention: David Beer

Dear David

PRC Building Services Pty. Ltd. letter of reference

I have worked in association with PRC Building Services Pty. Ltd. (PRC) for approximately 6 years for the management, supervision and/or provision of airborne fibre monitoring services for asbestos/hazardous materials related works.

In relation to the projects that both PRC and myself have been involved, PRC have always undertaken their asbestos removal works in accordance with the relevant legislation; namely the *Code of Practice for the Safe Removal of Asbestos [NOHSC: 2002 (2005)]* to achieve a suitable outcome in both the quality of the works and the mitigation of the health risk posed by asbestos containing materials during and following asbestos/hazardous materials removal works.

Recent Project works with SLR involvement:

SLR managed and supervised the Occupational Hygiene component of recent asbestos roof removal works at the Western Power Kewdale Depot located at 500 Abernethy Rd, Kewdale, 6015.

The works involved:

- Establishment of approximately 12,000m² of plastic sheeting throughout the internal surfaces of the Mechanical and Electrical Warehouses at the site to avoid cross contamination of internal building surfaces;
- Removal of the corrugated asbestos fibre cement roof sheets from the Mechanical and Electrical Warehouses (approx. 6000m² of asbestos roof sheets, flashings, capping etc.); and
- Removal of corrugated fibre cement wall sheets from the north elevations of both warehouses;
- Complete decontamination of the plastic prior to removal from the internal surfaces of the warehouses;

PRC carried out the works to a high standard throughout the project duration. Further, at no stage throughout the works did airborne monitoring analysis identify fibre concentrations above the acceptable background limit; namely <0.01f/ml. Works value: ~\$750 000.

Yours sincerely

Trent Rowden
HAZMAT Senior Project Consultant/Team leader
