

MEMORANDUM

TO: WHOM IT MAY CONCERN
FROM: WILLIAM TREGEAR
DATE: 27 APRIL 2010
SUBJECT: PERTH ROOFING REFERENCE

Perth Roofing Company have recently completed a significant asbestos removal and re-cladding project at our Bunbury works.

The scope involved mobilisation of all equipment, materials and labour to Bunbury and was completed over an 8 week period working 7 days per week.

The works included removal of 2,000sqm of asbestos sheeting from a portion of our Fertiliser storage shed and replacement with a combination of Stainless Steel and Ampelite sheeting.

Access to the works required complex scaffolding and the need to have people working at heights under strict supervision both internally and by CSBP.

CSBP expect the highest of work standards with this project being the Fifth stage of asbestos removal from our sites totalling over 130,000 sqm.

Perth Roofing Company clearly understood the expectations of CSBP and were diligent in ensuring that all works were completed to our satisfaction.

Regards
William Tregear
